About object

10 August 2022   08:12

In java script object are king. If you understand object you understand JavaScript.
In JavaScript almost everything are object.
  • Booleans can be objects (if defined with the new keyword)
  • Numbers can be objects (if defined with the new keyword)
  • Strings can be objects (if defined with the new keyword)
  • Dates are always objects
  • Maths are always objects
  • Regular expressions are always objects
  • Arrays are always objects
  • Functions are always objects
  • Objects are always objects

Internal representation in JavaScript ;

Internal properties define the behavior of code as it executes but are not accessible via code. ECMAScript define the internal for object in JavaScript internal properties are indicated by double-square-bracket notation . For example; JavaScript function is an object and it has call property
